

SKILL WEEK-3 : ACID PROPERTIES AND ISOLATION

1. CREATE DATABASE

CREATE DATABASE Bank_ACID_DB;

USE Bank_ACID_DB;

The screenshot shows the SQL Enterprise Manager interface. On the left, the 'SCHEMAS' tree is expanded, showing the '2520080069_ananya' database. The 'Tables' folder is expanded, showing a list of tables: bank_transactions, class, class_info, first_table, orders, second_table, and student_marks1. The 'Views' folder is also expanded, showing a list of views: bank_transactions, class, class_info, first_table, orders, second_table, and student_marks1. The 'Stored Procedures' and 'Functions' folders are also expanded. The 'bankdb' database is also visible in the tree. The 'bookflow_db', 'kludb', and 'sys' databases are also visible. The 'Administration' tab is selected. The 'Schemas' tab is also visible. The 'Information' tab is selected. The 'Schema: 2520080069_ananya' is displayed. The 'Output' window shows the execution of the 'USE 2520080069_ananya;' statement. The output table has columns: #, Time, Action, and Message. The first row shows the execution of the statement at 12:09:49, resulting in 0 row(s) affected. The second row shows the execution of the statement at 12:14:28, also resulting in 0 row(s) affected.

#	Time	Action	Message
1	12:09:49	USE 2520080069_ananya	0 row(s) affected
2	12:14:28	USE 2520080069_ananya	0 row(s) affected

2. CREATE CUSTOMER TABLE

CREATE TABLE Customer (
 Customer_ID INT PRIMARY KEY,
 Customer_Name VARCHAR(100) NOT NULL,
 Phone VARCHAR(15),
 City VARCHAR(50)
);

The screenshot displays a database management interface. On the left, a tree view shows various databases including 'bankdb', 'bookflow_db', 'kludb', and 'sys'. The main editor window contains the following SQL code:

```

3 CREATE TABLE Customer (
4     Customer_ID INT PRIMARY KEY,
5     Customer_Name VARCHAR(100) NOT NULL,
6     Phone VARCHAR(15),
7     City VARCHAR(50)
8 );
9

```

Below the editor, the 'Output' pane shows the execution results:

#	Time	Action	Message
1	12:09:49	USE 2520080069_ananya	0 row(s) affected
2	12:14:28	USE 2520080069_ananya	0 row(s) affected
3	13:27:47	CREATE TABLE Customer (Customer_ID INT P...	0 row(s) affected

3. CREATE ACCOUNT TABLE

```

CREATE TABLE Account (
    Account_No INT PRIMARY KEY,
    Customer_ID INT,
    Account_Type VARCHAR(20),
    Balance DECIMAL(12,2),
    Branch VARCHAR(50),
    FOREIGN KEY (Customer_ID)
    REFERENCES Customer(Customer_ID)
);

```

```

10 CREATE TABLE Account (
11     Account_No INT PRIMARY KEY,
12     Customer_ID INT,
13     Account_Type VARCHAR(20),
14     Balance DECIMAL(12,2),
15     Branch VARCHAR(50),
16     FOREIGN KEY (Customer_ID)
17     REFERENCES Customer(Customer_ID)
18 );

```

Below the query editor, there is a toolbar with options like 'Result Grid', 'Filter Rows', 'Edit', and 'Export/Import'. The 'Result Grid' is active, displaying the following data:

Account_No	Customer_ID	Account_Type	Balance	Branch
10001	101	Savings	50000.00	Hyderabad
10002	102	Savings	82000.00	Vijayawada

32. COMMIT TRANSFER

```
COMMIT;

The screenshot shows a database action log with the following entries:

#	Time	Action	Message
28	13:42:04	ROLLBACK TO SAVEPOINT Withdrawal1	0 row(s) affected
29	13:42:27	COMMIT	0 row(s) affected

33. FINAL BALANCES

```
SELECT  
    Account_No,  
    Balance  
FROM Account  
WHERE Account_No IN (10001,10002);
```

The screenshot shows a database management interface. On the left, a tree view displays the database structure: Functions, bankdb (Tables, Views, Stored Procedures, Functions), bookflow_db, kludb, and sys. The main area shows a SQL query being executed:

```

134 • SELECT
135     Account_No,
136     Balance
137 FROM Account
138 WHERE Account_No IN (10001,10002);
139

```

Below the query, the 'Result Grid' is displayed with the following data:

Account_No	Balance
10001	50000.00
10002	82000.00
NULL	NULL

At the bottom left, the schema is identified as 'Schema: 2520080069_ananya'. On the right, there are buttons for 'Edit', 'Export/Import', 'Result Grid', and 'Form'.

START TRANSACTION;

The screenshot shows the 'Action Output' window of a database management tool. It displays a list of actions performed during a transaction, including a SELECT, START TRANSACTION, two UPDATEs, another SELECT, a COMMIT, and a final START TRANSACTION. Each action is accompanied by a status icon (green checkmark) and a message indicating the result.

The bottom pane is the 'Output' window, showing the 'Action Output' table. It contains the following data:

#	Time	Action	Message

40. CONSISTENCY

Before transfer:

Account 10001 = 50000

Account 10002 = 75000

Total = 125000

After transferring 10000:

Account 10001 = 40000

Account 10002 = 85000

Total = 125000

The total money remains consistent.

41. ISOLATION

Isolation means:

Multiple transactions executing at the same time should not incorrectly interfere with each other.

Example:

Transaction T1:

Transfer money.

Transaction T2:

Read account balance.

The database controls how much of T1 is visible to T2.

42. DURABILITY

START TRANSACTION;

UPDATE Account

SET Balance = Balance + 5000

WHERE Account_No = 10001;

COMMIT;

The screenshot shows a database management tool interface. On the left, the 'Schema' is set to '2520080069_ananya'. The main area displays a SQL script with the following lines:

```
164  
165 • START TRANSACTION;  
166 • UPDATE Account  
167 SET Balance = Balance + 5000  
168 WHERE Account_No = 10001;  
169 • COMMIT;  
170
```

Below the script, the 'Output' tab is selected, showing a table of execution results:

#	Time	Action	Message

47	13:52:23	UPDATE Account SET Balance = Balance + 5000 ...	1 row(s) affected Rows matched: 1
48	13:52:23	COMMIT	0 row(s) affected

At the bottom left, there are tabs for 'Object Info' and 'Session'.

The screenshot displays a database management interface. At the top, a SQL query is entered in a text area:

```
214 • SELECT Balance
215 FROM Account
216 WHERE Account_No = 10001;
217 • COMMIT;

PART I – READ COMMITTED EXPERIMENT

SESSION 1:

SET SESSION TRANSACTION ISOLATION LEVEL

SET Balance = Balance + 10000

WHERE Account_No = 10001;

The screenshot displays a SQL IDE interface. On the left, a sidebar shows the 'Schema: 2520080069_ananya'. The main editor contains a SQL script with line numbers 219 to 226. The script is as follows:

```
219 SET SESSION TRANSACTION ISOLATION LEVEL
220 READ COMMITTED;
221 START TRANSACTION;
222 UPDATE Account

The screenshot displays a database management interface. At the top, a SQL query is entered in a text area:

```
258 • SET SESSION TRANSACTION ISOLATION LEVEL
259   SERIALIZABLE;
260 • START TRANSACTION;
261 • SELECT *
262   FROM Account
263   WHERE Account_No = 10001;

* NULL	* NULL	* NULL	* NULL	* NULL

On the right side of the interface, there are buttons for "Result Grid", "Form Editor", and "Field Types".

At the bottom, an "Output" section shows a log of actions performed:

The screenshot shows a SQL execution window with a list of statements on the left and an 'Output' pane on the right. The statements are: START TRANSACTION; (line 274), UPDATE Account (line 275), SET Balance = Balance + 5000 (line 276), WHERE Account_No = 10001; (line 277), and COMMIT; (line 278). The 'Output' pane shows a table of execution results with columns: #, Time, Action, and Message. The results show a successful update of the account balance.

The screenshot displays a database management interface. On the left, a sidebar shows 'Administration' and 'Schemas' tabs, with 'Schemas' selected. Below it, 'Information' is visible. A 'Schema:' label is followed by '2520080069_ananya'. The main area shows a SQL script with line numbers 292 to 302. The script is as follows:

```
292
293 • START TRANSACTION;
294 • UPDATE Account
295   SET Balance = Balance - 10000
296   WHERE Account_No = 10001;
297 • SAVEPOINT AfterDebit;
298 • UPDATE Account
299   SET Balance = Balance + 10000
300   WHERE Account_No = 10002;
301 • COMMIT;
302
```

Below the script, there is an 'Output' section with a dropdown menu set to 'Action Output'. It displays a table of execution results:
